### About

I'm a Product Manager with a background in frontend engineering. While building products, I became increasingly curious about the decisions behind them, why users behave the way they do, what creates value, and how successful products balance customer needs with business goals. Leaning toward studying product, I explore product thinking through teardowns, case studies, user interviews, analysis and hands-on projects. My experience in engineering gives me a practical understanding of how products are built, helping me think critically about trade-offs, feasibility, and the path from idea to execution.

### Experience

---

**Radease Limited, Nigeria** — June 2025 – May 2026

**Junior Frontend Developer & Product Owner (NYSC)**

- Led the development of Alerah's marketing website and doctors' portal, owning frontend architecture, roadmap, implementation, and deployment.
- Contributed to product decisions by translating business requirements and user needs into clearly defined features and intuitive user flows.
- Defined and implemented role-based access control (RBAC), structuring user roles and permissions to improve users extent and usability.
- Built a real-time analytics dashboard, enabling doctors to monitor performance and health trends of their patients, eliminating the need for hospital visits by 98%.
- Worked closely with backend engineers to align on APIs, authentication, system behavior, and latency constraints, ensuring reliable and seamless product performance.
- Facilitated User Acceptance Testing (UAT) by validating features against requirements, identifying edge cases, and refining releases before launch.
- Acted as a bridge between technical execution and product needs, ensuring features aligned with user and business goals.

**Payd Biashara, Kenya** — February 2025 – June 2025

**Frontend Developer Intern**

- Contributed to the development of Biashara's MVP, a fintech product enabling users to send money at scale, supporting multiple recipients in a single transaction reducing the cost and time spent in payrolling and cross border transactions.
- Contributed and developed bill tracking and spending categories, helping users monitor expenses and manage finances effectively.
- Contributed to an interactive analytics dashboard to visualize transaction history, spending patterns, and financial insights.

### Skills

---

**Product & Strategy:** Roadmap Creation, PRD & Spec Writing, User Research & Interviews, Data-Driven Decision Making, A/B Testing, Wireframing (Figma), Stakeholder Management, Cross-Functional Execution, Prioritization, Competitive Analysis, Agile

**AI-Native Workflows:** Claude Code, MCP server integrations, AI-assisted PRD authoring, rapid prototyping (Lovable, Claude Code)

**Data:**, Metabase

### Projects

#### [Spotify Users Dissatisfaction](#)

---

Conducted analysis of Spotify's user experience, examining challenges around offline playback, subscription management, load time, and customer support, with recommendations for improving the overall user satisfaction.

#### [Sterling Bank APP - Product Teardown](#)

UX teardown identifying four critical friction points across authentication, transaction flow, navigation, and support chat, with user personas, user research, Success Metrics, and redesign proposals

#### [ResumeRX](#)

ResumeRx is an AI-powered career platform that helps job seekers tailor their resumes to specific roles, generate cover letters, identify skill gaps, prepare for interviews, and track their applications, all in one place.

### Education

---

**Obafemi Awolowo University** 2018 – 2024

Bachelor of Education (B.Ed) — Educational Management & English Language
